## **Environmental Policy Statement**

Advent Medical recognises our environmental responsibilities and has determined this policy to promote a greater awareness of the issues and to ensure that all corporate undertakings are managed in an environmentally sound and proper manner.

Environmental implications are carefully considered when planning, implementing and monitoring work operations.

Employees are given appropriate information and training to enable and encourage them to act in accordance with this policy.

It is the Company's aim to minimise waste at source, in so far as is reasonably practicable. An area of priority is the continuation of our policy of responsible energy management and conservation.

Where possible the Company will endeavour to support sustainable resource and recycling initiatives.

Wherever practicable the Company will seek to promote the introduction and use of environmentally acceptable products.

Current environmental legislation is fully observed when storing and transporting all non recyclable waste off-site for disposal. In all instances, compliance with current Laws and Regulations is regarded as the minimum standard acceptable to the Company, to be exceeded where possible through the application of the best environmental practices within the industry.
